#### Traditional well development/rehabilitation

These methods often utilize mechanical, hydraulic or chemical techniques in order to maximize well production and efficiency.

These technologies may include:

- Surging
- Swabbing
- Brushing
- Jetting
- Chemical Injection

By using a suite of techniques and tools SWS can significantly increase the performance of your well.

#### Impulse Generation

Relatively new impulse generation technology will likely produced the desired results by itself or in concert with the traditional methods previously mentioned.

How does it work?

- Repeated instantaneous releases of high-pressure gas impulses inside the well
- Creates concussive shock waves
- Creates expanding, contracting and oscillating bubbles
- Intensely surges water in and out of the gravel pack, screen and/or aquifer
- Breaks up scale and encrustation
- Removes bacteria slime/biofouling

SWS HAS TOOLING CAPABLE OF DEVELOPING & REHABILITATING WELLS UP TO 24 INCH DIAMETER
